

The Java 2 Platform, Enterprise Edition (J2EE) enables for developing, deploying, and managing multi-tier server-centric applications. The J2EE platform adds the capabilities necessary to provide a stable, secure, and fast Java platform to the enterprise level. It provides value by reducing complexity of multi-tier solutions, resulting rapidly deployed and easily enhanced services.

Technosoft has extensive experience developing J2EE applications. Our applications are in use at hundreds of locations catering thousands of users. We provide services in following Java Technologies.
